SUMMARY OF PERMIT CONDITIONS (see attached Table 1):

The following pollutants are regulated: BOD₅, CBOD₅, Suspended Solids (TSS), Dissolved Solids (TDS), pH, Oil & Grease, Phosphorus, NH₃-N, Copper (Cu), Lead (Pb), Nickel (Ni), Zinc (Zn), and Flow.

The basis for the limitations established is summarized in the local limits evaluation reports entitled, "1996 RVRSA Local Limit Development Report", dated September, 1996, and prepared by Killiam Associates; and "Rockaway Valley Regional Sewerage Authority, IPP – Local Limits Report (Revisions)", dated July 13, 1999 and prepared by Killiam Associates. Below is a summary of key aspects of this renewal application.

1. *Flow:* Flow limitation is carried over from the previous permit.
2. *Parameters of Concern:* NH₃-N parameter frequency has been increased during the previous renewal permit from Quarterly to Monthly. The basis of this change has been the chronic violations this permittee has had over the past few years regarding this parameter.
3. *Other Parameters:* All other parameters are carried over from the previous permit.
